

I'm considering taking advantage of a senior position opening in our company.

Naima,
Fund Analyst

I'm ready to move up the ladder, and this could give me just the boost I need.

Tim,
Corporate lawyer

There's this job opening in our company that I'd like to take advantage of.

Michel,
Auditor

I know I will soon be given serious responsibility, and I'd like to gain more confidence in my financial decision-making.

John,
Regulator/Supervisor

I'd like to round off my career profile by focusing on financial skills and competences.

Pieter-Jan,
Engineer, Energy

I am increasingly asked to negotiate with private equity investors, and I would like to gain more insight into financial competences

Carole,
Biotech Biologist

1. Quantitative Analysis

Coupled with the short module Financial Modelling on Excel, helps you get your financial acumen gear ready for the trip ahead.

Based on actual business-life cases, it helps you gain fundamental concepts of statistics and probability, tools and modelling competences.

3. Financial reporting and analysis

Once you have gained this point, you will soon realise that there can be no accurate valuation without good data quality and understanding.

By the end of your trek, you will be able to thoroughly analyse published financial statements and use them in financial decision-making, with an eye out for their limitations

5. Derivatives

The pace picks up further with this challenging but rewarding module, where you will explore and gain a deep understanding of financial derivatives and the complex landscape of derivatives markets and products, and financial strategies.

7. Asset & liability management

Provides focused, theoretical and practical training in all relevant key ALM methodologies, and covers major approaches to the measurement and management of interest rate risk and hedging techniques.

Your exploration is supported by team-based, advanced computer simulation exercises.

At the beginning, they were participants

Throughout their journey, they are a team

at the end, they'd like to climb again

2. Corporate Finance & Restructuring

It is the starting point and cornerstone of the EMF programme. You will explore key foundations of finance, valuation principles and schemes, and the latest developments in corporate finance and the funding of firms.

4. International investments

When reaching this point in your journey, you'll be able to settle down and enjoy exploring the fundamentals of modern portfolio and asset allocation theories, construction techniques, all through real-world examples from the funds industry.

6. Risk management

You are almost there! This provides a perfect retreat on your financial management trip. You can rely on the knowledge acquired in previous modules to address a wealth of key topics related to financial risk management, operational risk management, and economic capital definition.

Naima,
Head of Investment Committee

Tim,
Managing partner

Michel,
Senior financial advisor

John,
Senior regulator/Supervisor
